

# STELIKON

FULL-SPECTRUM C4ISR ECOSYSTEM

*Architecting Sovereign Asymmetric Advantage*

CONFIDENTIAL E-DOCUMENT // DISTRIBUTION AUTHORIZED

STELIKON C4ISR // Page 1 of 3

# EXECUTIVE SUMMARY

## OPERATIONAL DOMINANCE & THREAT DIAGNOSTICS

---

Stelikon engineers comprehensive digital and kinetic dominance frameworks. We do not just defend networks; we control the battlespace. Our ecosystem integrates deterministic threat modeling, force-multiplying cryptographic infrastructure, and uncompromisable kinetic systems to grant allied nation-states ultimate asymmetric advantage against advanced persistent socio-political and digital threats.

# KINETIC SYSTEMS & EDGE HARDWARE

## DEFENSE SECTOR

---

### Autonomous Loitering Munitions

#### *Terminal Guidance / Swarm Reconnaissance*

Cost-asymmetric, high-precision autonomous drone platforms engineered for deterministic terminal guidance and coordinated saturation strikes in denied environments.

- > AI-driven target classification and terminal tracking
- > Mass SWARM synchronization against legacy air-defense
- > Radar-absorbent material constraints & minimal EM signature

### Redpocket Architecture (Espionage)

#### *Covert Network Enumeration & Telemetry*

Hardware-integrated shadow endpoints built for deep-cover operations. Designed to silently infiltrate target networks, establish persistent observation nodes, and extract intelligence without raising threat signatures.

- > Silent data exfiltration via encrypted Mesh Routing
- > Edge exploitation and autonomous enumeration
- > Physical payload delivery mechanisms

# NON-KINETIC & COGNITIVE WARFARE

## INTELLIGENCE SECTOR

---

### **Nabludenie (Social Pulse)**

#### *Predictive Threat Diagnostics & SoV Models*

Intelligence platform utilizing Share of Voice (SoV) prediction models and JSONB Entity Resolution to detect coordinated shifts in public momentum before they fully materialize.

- > Algorithmic sentiment vectors and historical event mapping
- > Automated tracking and linking of key political entities
- > WhatsApp Conversational Agent for 1-hour temporal queries

### **xArmy Operations**

#### *Decentralized Cognitive Warfare*

Central command for executing distributed cognitive operations across major platforms. Deploys staggered narrative synchronization and massive scale network management.

- > High-volume data ingestion via secure Webhooks
- > Automated target suppression and massive narrative scaling
- > Distributed Redis task execution for robust resilience

# CRYPTOGRAPHIC SOVEREIGN INFRASTRUCTURE

## ZERO-TRUST BLOCKCHAIN SECTOR

---

### **ScanFi Threat Diagnostics**

#### *Recursive Multi-Hop Tracing & AML*

Forensic graph-based intelligence for real-time risk scoring, recursive tracking, and algorithmic isolation of hostile assets within sovereign networks.

- > Dynamic risk scoring using 0-100 real-time threat indices
- > On-premise deployment for Air-Gapped confidentiality
- > Recursive Multi-hop tracing of toxic logic and sanctioned funds

### **Sovereign Ledger Implementations**

#### *Cryptographic Fiat Infrastructure (CBDC)*

Foundation for national digital currencies. We assemble permissioned ledger infrastructures tailored for national scale, ultra-rapid settlement, and verifiable transit of value.

- > Immutable state allocation and zero-trust resource transfer
- > Cryptographic administrative automation (Smart Welfare/Payroll)
- > Elimination of counter-party risk in inter-agency transfers
